SUMMARY

Web Developer experienced in developing end-to-end, database-driven web applications using Next.js, React, TypeScript, Tailwind CSS, Prisma ORM, and REST APIs. Capable of working across the entire development stack, including responsive frontend development, API design, backend business logic, authentication and authorization, database architecture, and application integration. Experienced in building interactive, multi-user systems with role-based features and complex data relationships. Strong analytical and problem-solving abilities, with a focus on writing maintainable, scalable, and user-centered applications.

EDUCATION

Muntinlupa City, Philippines
08/2022 - 07/2026

Bachelor of Science in Information Technology, Pamantasan ng lungsod ng Muntinlupa

Making High end web system, database management, and information systems, with hands-on experience and applying it into real word Tech Industry.

WORK EXPERIENCE

Ontap Creatives,
Las Pinas, Philippines
2026 march - sept

Software Developer

- Primarily responsible for designing, developing, and maintaining responsive and interactive frontend applications using Next.js, React, TypeScript, and Tailwind CSS, translating business requirements and system workflows into functional user interfaces.
- Develop and maintain production-ready web interfaces for core business operations, ensuring consistent user experiences across different modules, workflows, and user roles.
- Integrate frontend applications with REST APIs and backend services, handling data fetching, state management, validation, error handling, loading states, and dynamic UI updates based on server responses
- Implement database-driven frontend features by consuming and managing data from backend APIs, ensuring that user interfaces accurately reflect application data, relationships, permissions, and business rules.
- Develop reusable UI components and frontend structures to improve maintainability, consistency, and development efficiency across the application.

- Implement authentication and role-based user experiences, dynamically controlling accessible pages, navigation, actions, and interface elements based on authenticated user roles and permissions.
- Develop interactive forms and workflows for creating, updating, viewing, and managing application data while implementing client-side validation and clear user feedback mechanisms.
- Build responsive layouts and mobile-friendly interfaces, ensuring application functionality and usability across desktop, tablet, and mobile screen sizes.
- Collaborate closely with backend development to integrate frontend features with APIs, coordinate data requirements, troubleshoot integration issues, and ensure reliable communication between the client and server layers.
- Troubleshoot and resolve frontend issues involving API responses, application state, routing, authentication flows, component behavior, and responsive UI inconsistencies.
- Contribute to the overall application architecture by organizing frontend modules, reusable components, API integrations, and shared utilities into maintainable and scalable structures.
- Continuously improve existing interfaces and application workflows by identifying usability issues, simplifying user interactions, and refining frontend behavior based on system requirements and actual user needs.

Ontap Creatives,
Las Pinas, Philippines
03/2026 - present

Web developer - intern

- Developed the frontend of the company's e-commerce web application using Next.js, React, TypeScript, Tailwind CSS, and Framer Motion, transforming the existing static website into a responsive and interactive customer-facing platform.
- Developed the frontend of the company's e-commerce web application using Next.js, React, TypeScript, Tailwind CSS, and Framer Motion, transforming the existing static website into a responsive and interactive customer-facing platform.
- Built reusable React components and responsive layouts while implementing interactive elements, animations, form validation, loading states, and client-side interactions to improve usability and maintainability.
- Built reusable React components and responsive layouts while implementing interactive elements, animations, form validation, loading states, and client-side interactions to improve usability and maintainability.
- Conducted frontend debugging, responsive testing, and usability improvements throughout development, resolving UI and integration issues and helping prepare the application for production deployment.
- Contributed to the delivery of a production e-commerce system that continues to support the company's operations by improving its online product presentation and providing customers with a more streamlined digital ordering experience...

PROJECTS

2026 march - sept

OnTap Portal System, NFC Digital Business Card Management Platform

A production-ready NFC digital business card platform that transforms traditional business cards into manageable digital identities, allowing users to create, manage, and share professional profiles, business information, contacts, and digital portfolios through NFC-enabled experiences. Built with Next.js, React, TypeScript, Tailwind CSS, Prisma ORM, MySQL, and REST APIs, with multi-role access, analytics, inquiries, and database-driven workflows supporting the platform's core operations.

07/2026 - 08/2026

RÖK Provenance, NFC Product Authentication & Provenance Platform

Enterprise NFC product-authentication platform built with Next.js, TypeScript, Prisma, MySQL, Redis, BullMQ, and Polygon L2 for the luxury sector. Implements NTAG 215 and NTAG 424 DNA cryptographic verification, fraud and risk detection, RBAC, JWT authentication, CSRF protection, event sourcing, and blockchain-anchored audit logs to provide secure and verifiable product provenance. Includes NFC provisioning, payment and supplier integrations, anomaly management, administrative workflows, and automated background processing.

09/2025 - 12/2025

burnbox advertising solution

Business website and admin CMS for a printing and advertising company, built with Next.js, React, TypeScript, Tailwind CSS, Prisma, and MySQL, with API routes deployed on Vercel. It has a public product and service catalog, a quotation and price calculator, and a Leaflet store locator with route directions. Customer inquiries are verified by email OTP and screened by Sightengine image moderation, and visitors are tracked by IP geolocation and shown on a 3D globe. Security includes role-based access control (RBAC), HMAC-signed JWT authentication in httpOnly cookies, bcrypt password hashing, email-invite onboarding with password reset, Zod and validator.js input checks, and rate limiting with IP blocking. The admin dashboard manages inquiries, sales leads, feedback, the gallery, and services, with Recharts analytics and in-app notifications. It also offers a visual site editor that saves theme and content settings as JSON, automated Nodemailer email workflows, and image uploads stored through the GitHub API.

07/2026 - 09/2026

Art Lab – Artist Portfolio and Creative Challenge Platform

Creative social platform for artists and clients built with Next.js, React, TypeScript, Tailwind CSS, PostgreSQL, and Prisma. Artists can share artwork, build portfolios, join creative challenges, and track their progress. Clients can discover artists, save artwork, manage projects, and message artists directly. It uses role-based access control, secure login with Auth.js, and form validation with Zod. Other features include image duplicate detection to protect original artwork, trending and recommended artists, comments, notifications, content moderation, an admin dashboard with analytics, and audit logs.
